

data management - overview

UNDERGROUND

Tier 0

LNGS COMPUTING

Tier 1

data management

hardware:

2 DAQ: Padova for Ge

HD for muon & Ge

→ Phase I: PD + HD

→ Phase II: HD + HD in one crate

3. DAQ slow control

.. LARGE, test facilities @home

short-term storage underground (8 TB)

link: underground – LNGS lab

backup & MGDO

IT-service: buy 84 TB (25 k€) ?? ; now 1/3

data management

software:

trigger

data formats (which info in what
online monitoring

interfacing slow control & DAQ

repository for analysis software

estimate disk space

tasks

data taking: Phase I & II + Muon + Large <> Padova - HD

slow control:

calibration:

backup of raw data + slow control

monitoring beyond slow control (histograms of time lines)

ELOG

summaries: structure of Ge array and FE, accum. exposure

Monte Carlo

software repository

.....

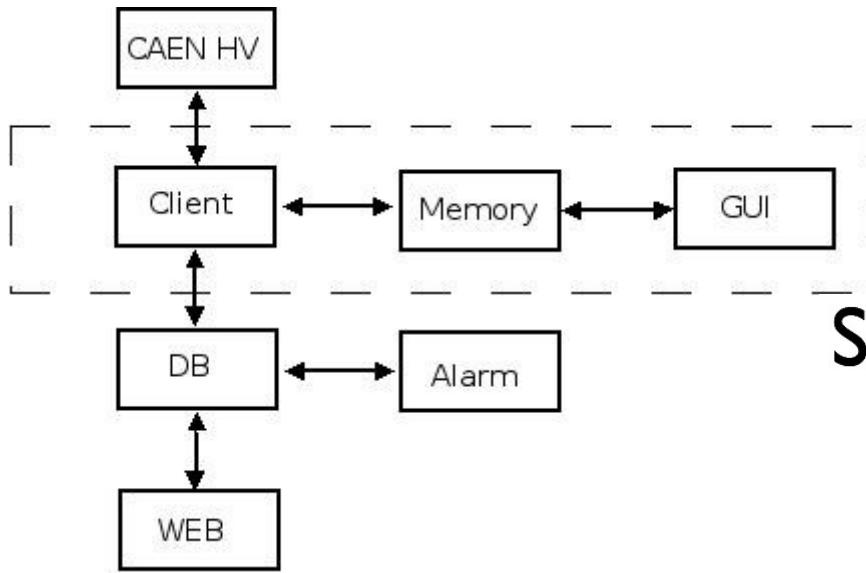

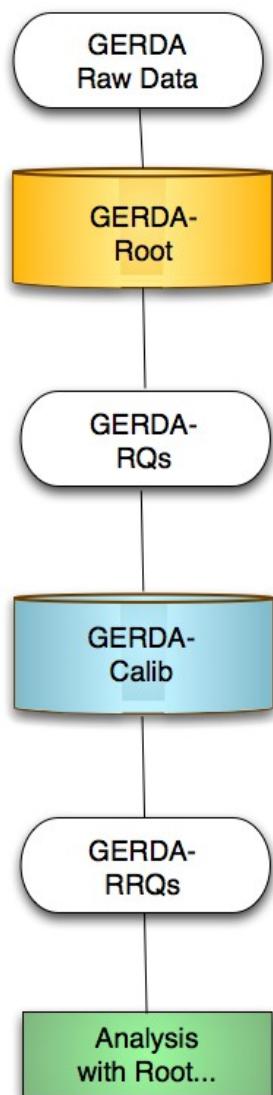

The GERDA Collaboration wants to run efficiently, i.e.

quick & thorough checking needed

no superfluous work, however double-checks

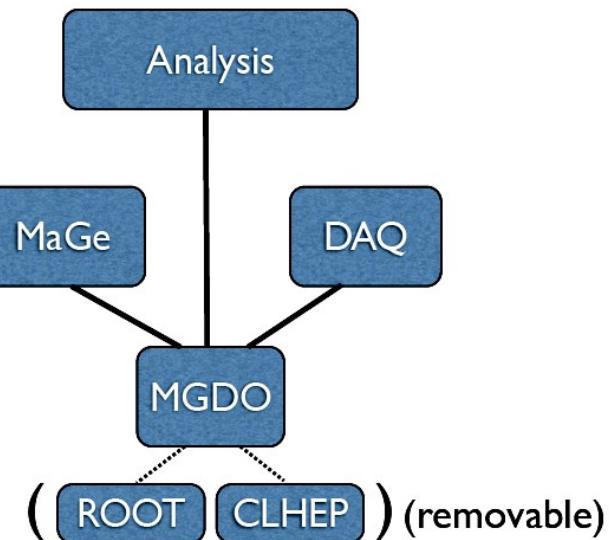

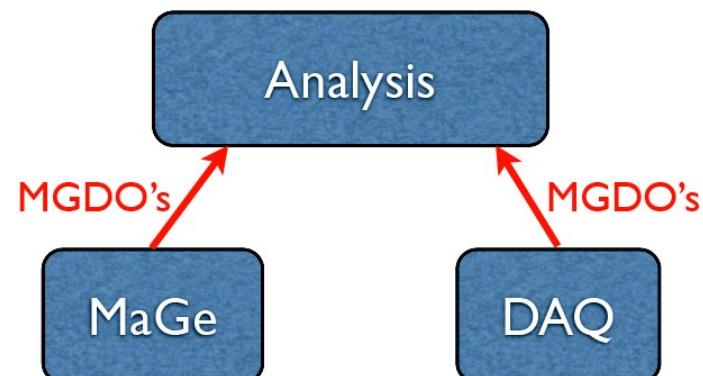

Everybody in GERDA should be empowered to analyze

Many roads to Rome
